

Objective

Evaluate candidates on their problem-solving abilities, technical proficiency, and analytical skills related to analyse and think out of box.

Instructions

Candidates are required to complete the following tasks using the provided Excel dataset (task sheet). The tasks should be submitted in an Excel file format along with a brief explanation of their approach and findings.

1. Identify Key Trends

Analyze the data to identify at least two significant trends related to purchase activities, expenses, or operational performance. Provide charts or graphs to illustrate these trends.

2. Interpret Findings

Write a brief summary explaining the implications of each trend. Describe how these insights could influence decisions for process improvement or cost-saving strategies.

Deliverable: Submit visualizations and a summary of your findings.

or Process Improvement Recommendations

1. Efficiency Analysis

Based on your analysis, suggest two or more process improvements that could enhance efficiency or reduce costs. Describe the data points or trends that informed each recommendation.

2. Scenario Analysis

Propose hypothetical scenarios demonstrating how implementing these improvements might impact overall performance. Support your scenarios with data points or calculations.

Deliverable: A document with your recommendations, justifications, and scenario analysis.
